For Immediate Release

FieldServer Technologies Hochiki FireNET Gateway

February 28, 2010 – FieldServer Technologies has released their latest Fire Alarm Control Panel driver for the Hochiki FireNet and FireNET Plus protocols. This new gateway enables Hochiki FireNet 4127 and FireNET Plus Fire Alarm Control Panels to easily interface with building automation and industrial automation systems that might use other protocols such as BACnet, LonWorks, JCI Metasys N2, Modbus, EtherNet/IP or others.

FieldServer enables these owners to view the ancillary information and not interfere with the AHJ approved fire control system. Interfacing Fire Alarm Control Panel information into the Building Automation Systems (BAS) provides the building manager web access to monitor fire control ancillary information remotely.

Building Managers, System Installers and Fire Alarm Control Panel manufacturers trust FieldServer Technologies to provide effective, efficient and seamless interface to BAS. Working closely with every major FACP manufacturer in the United States, FieldServer has developed comprehensive protocol drivers that work with all current and most legacy FACP. FieldServer maintains expert knowledge of protocol requirements and updates drivers when manufacturer changes are released.

About FieldServer Technologies

FieldServer Technologies, a wholly owned division of Sierra Monitor Corporation based in California, designs and markets a broad line of devices that enhance communication between various instruments, systems, machines and other devices that utilize non-compatible data protocols. The FieldServer combined with the extensive driver library makes the perfect package to achieve interoperability.
