

For Immediate Release

Liebert SiteLink-12 LonWorks® Adapter Completes LonMark Certification

January 21, 2004 – The FieldServer Liebert SiteLink-12 LonWorks® Adapter is a protocol translator gateway enabling the Liebert SiteLink-12 to communicate with LonWorks devices and networks. The FieldServer will connect the Liebert SiteLink-12 to a LonWorks network through the Liebert SiteLink-12's Modbus RTU protocol. The FieldServer allows for 288 points to be transferred from the Liebert SiteLink-12 network to the LonWorks network. The Adapter will reside on a Liebert SiteLink-12 network as a Master device. Data points from each of the 12 SiteLink LAM units will be converted to LonWorks format. The Adapter is connected to the LonWorks Network by being commissioned into the network using a Network Management tool (i.e.: LonMaker or equivalent package). For a full list of points available via the Liebert SiteLink-12 LonWorks Adapter please refer to the Adapter Manual or contact FieldServer Technologies

In addition to the Liebert and LonWorks connectors, the Liebert SiteLink-12 LonWorks Adapter includes an Ethernet connector. Configuration files can be downloaded via the serial or Ethernet ports.

About FieldServer Technologies

FieldServer Technologies, a wholly owned division of Sierra Monitor Corporation based in California, designs and markets a broad line of devices that enhance communication between various instruments, systems, machines and other devices that utilize non-compatible data protocols. The FieldServer combined with the extensive driver library makes the perfect package to achieve interoperability. For more information about FieldServer Technologies, please visit its Web site at <http://www.fieldserver.com>
