# LonMark Certified FieldServer Technologies' Gateways

*January 26, 2011* – Several FieldServer Technologies' gateways have won LonMark Certification as Gateways with changeable Network Variable types. The newly LonMark Certified products include the FS-B2011 Serial-LonWorks-Ethernet Gateway, FS-B3510 Multiport LonWorks Gateway and the FS-B4011 10-Port LonWorks Gateway. FieldServer, a member of LonMark International, has long been the industry leader in LonWorks gateways, providing integrators and end-users with the interoperability desired for over 10 years.

FieldServer already has several gateways with LonMark Certification for specific applications, but this is a first to receive certification for configurable gateway solutions. The design of the FieldServer LonWorks Gateway provides the integrator the unique capability to interface 1000+ network variables with a single configurable gateway versus only 50 – 250 found in similar products. Thus, the FieldServer LonWorks Gateway provides unsurpassed, cost-effective integration power. For more information about the FieldServer LonWorks Solution, visit the website at [www.fieldserver.com/LonWorks/](http://www.fieldserver.com/LonWorks/).

LonMark International developed the rigorous LonMark Certification Program to provide confidence to end-users and integrators that products from multiple manufacturers work together. Gateways are key to interoperability among building automation systems, bringing valuable data from proprietary and third-party devices to the LonWorks network. FieldServer Technologies' extensive protocol driver library provides access to over 100 protocols linking thousands of devices in the building automation and industrial control industries.

### About FieldServer Technologies and ProtoCessor

FieldServer Technologies, a wholly owned division of Sierra Monitor Corporation (OTC BB: SRMC.OB) based in California, designs and markets a broad line of devices that enhance communication between various instruments, systems, machines and other devices that utilize non-compatible data protocols. The FieldServer combined with the extensive driver library makes the perfect package to achieve interoperability. Drivers included in this library are Modbus, LonWorks, BACnet, Metasys, Allen Bradley EtherNet/IP, plus drivers for fire alarm panels, controllers, and many other proprietary and legacy devices.
