

For Immediate Release

FieldServer Technologies Profibus Gateways

May 4, 2007 – FieldServer Technologies, a leader in protocol gateways for process control and building automation, has released a series of standalone gateways for Profibus DP. The new FS-B3512 for Profibus Slave and the FS-B3520 for Profibus Master applications provide a reliable and easy-to-use interface between Profibus DP and any other protocols available in the extensive FieldServer Protocol Library. With over 80 protocol drivers available from FieldServer Technologies, integrators can provide users with interoperability necessary to gain the most from their Profibus network.

These gateways not only include a Profibus DP port, but also offer 4 serial ports, 2 Ethernet ports and a LonWorks port, thus enabling the user to bring together a number of different devices into a Profibus DP network using a single gateway.

About FieldServer Technologies

FieldServer Technologies, a wholly owned division of Sierra Monitor Corporation based in California, designs and markets a broad line of devices that enhance communication between various instruments, systems, machines and other devices that utilize non-compatible data protocols. The FieldServer combined with the extensive driver library makes the perfect package to achieve interoperability.
